

# Systems Technology Management

## *Project, Security, System, and Network Technology Services Worldwide*

Systems Technology Management is your source for services related to any type of data and telecommunications networking, systems, security, copper or fiber optic cabling, as well as any other project management and networking needs.

Systems Technology Management has extensive experience and provides high quality services for all sizes of businesses and government projects.

From basic local area network or application projects to large international wide area network projects and anything in between, Systems Technology Management can provide your company with the best and highest quality installation, configuration, and project management services.

Systems Technology Management can provide telecommunication, data network, and server installation and configuration, in either controlled building Data Center and Central Office environments or field cabinet locations.

We work with telecommunications, network, and data equipment from many different vendors, so we can provide your project with experienced and knowledgeable workers. In a large multi-vendor network, we have outside partner resources that we can use to provide additional vendor specific configuration and implementation services for just about any vendor equipment.

Systems Technology Management can also provide network design, security services and consulting, and project management services for any size project, from small offices to multi-state fiber optic network implementations.

For all your networking and Information Technology needs, contact us at (412) 580-3734 or [bucky@systechman.com](mailto:bucky@systechman.com).
